GENETIC SOLUTIONS
BULL SALE

**SELLING 247 18+
MONTH OLD BULLS**

**WE HAVE PARTNERED WITH THE BEST
TO BRING YOU THE BEST.**

**NOVEMBER 26, 2016
MARIANNA, FL**

WELCOME TO THE SALE...

Welcome To Consolidated Genetic Solutions annual fall bull sale at Southern Cattle Company!

It's with great pleasure that we offer you the kind of bulls that you have come to expect from high-reputation programs. These bulls are the type and kind of cattle that will keep a commercial producer in business, regardless of what the cattle market is doing. You will find that these bulls are without a doubt, leaders in their respective breeds in terms of quality from every angle. Within this diversified set, you could go in whatever direction your program desires - taking you from performance, maternal, to some of the best carcass genetics available with the phenotype to suit the most discriminating breeder. I for one, don't know where else you could go to find an offering of this magnitude... I can honestly say, that it's like no other. Never have such high-reputation breeders consolidated to offer this type of offering anywhere, and we are excited for your evaluation.

Besides the fact that the cattle represented for sale November 26th are as good as you can get from what I feel to be some of the best multi-generation reputation herds available, they also have a few other unique qualities that will pay dividends to their new owners:

AGE ADVANTAGE OVER OTHER BULLS OF SIMILAR QUALITY.

- Top sort from the Nation's best programs within their age bracket.
- Able to cover a few more cows simply because of age (18+ months old)
- Selling older bulls allowed us to develop the bulls with longevity in mind

HEAT ADAPTED ADVANTAGE OVER OTHER BULLS OF SIMILAR QUALITY.

- All the bulls have either been, born and raised in the Southeast or were delivered approximately one year ago. I have confidence that these bulls will perform anywhere, but specifically designed/developed to excel in the Southeast. The guesswork is done and anything that would not adapt to our harsh environment has sorted itself.
- Unfortunately, it often takes buying cattle out of your region to get the sort you want in terms of quality and EPD's. Our vision with the Consolidated Genetic Solutions sale was that we sort the RIGHT bulls early and acclimate them to your environment prior to the sale in attempt to minimize risk and add immediate value for you the customer.... Buy the bulls you always wanted without all the risk, win-win!

VOLUME OF BULLS ADVANTAGE OVER OTHER BULLS OF SIMILAR QUALITY.

- Where else would you be able to find as many bulls that do as much right?
- The overall quality and EPD profile on this set of bulls will rival most other seed-stock programs Nationwide period.
- Many of these bulls will be out of some of the truly elite cows in the country either through embryo transfer or from herds that have been extremely disciplined over several decades of breeding. Some of the absolute best cattle in the country year in and year out.

DEVELOPMENT OF BULLS ADVANTAGE OVER OTHER BULLS OF SIMILAR QUALITY.

- These bulls are feedlot free in terms of development they have had access to some sort of grazing always after weaning. We have purposely kept these bulls out where they can get ample exercise and graze as much as possible with your best interest in mind.
- When supplemented, the bulls have always been fed through a TMR and ground hay has been a large portion of their diet with your best interest in mind.
- The bulls have not been pushed. Although, we do feel that they were kept up in adequate shape and the genetic potential of these bulls has been met. Please know that there were times throughout our development process that they were hard to look at. We did this with your best interest in mind and a steady eye on our target of having the bulls presentable and not overdone on November 26th in optimum working condition.

In closing, I want to articulate that our primary focus is to offer bulls that will give our customers every opportunity to succeed in the cattle business. That mindset is what drives our method, and that is still how we approach every aspect of our seed-stock operation. We look forward to visiting with you on November 26th.

Take care,
Ken & Jenny Stewart,
Managers Southern Cattle Company

SALE LOCATION

Southern Cattle Company, 4226 Hwy 231, Marianna, FL 32446
Located 9 miles North of I-10 on US 231.

ONLINE BROADCAST

The sale will be broadcast live online with www.DVAuction.com.
See page 2 for more information.

HERD HEALTH

All cattle will be accompanied with proper health certificates for immediate shipment. Herd Veterinarian, Dr. Todd Anderson, Panhandle Veterinary Services, 850-638-4857.

TRUCKING

Derek Schrader 601-299-0904

TERMS & CONDITIONS

Cattle will sell under the Terms and Conditions as recommended by the American Angus Association. Terms of sale are cash unless other payment terms are arranged prior to the sale. All purchases are to be settled at the conclusion of the sale unless approval has been given for purchaser to be invoiced. All cattle will remain at Southern Cattle Company until proper settlement is made. Any cattle not settled in 30 days will be subject to 2% interest charge per month.

SEMEN INTEREST

Consolidated Genetic Solutions will retain one-third revenue sharing and semen interest on every bull selling. Buyer retains full possession and full salvage value.

VOLUME BUYER DISCOUNT

If you purchase six (6) or more bulls, you will receive a 5% discount.

SUPPLEMENTAL INFORMATION

A supplemental sheet will be available on sale day with complete and up-to-date information. Announcements from the auction block take precedence over sale book information.

SOUTHERN CATTLE COMPANY BREEDING SOUNDNESS GUARANTEE

When you invest in our program for your herd sires, you are also investing in our belief system as well: we will make sure that you are treated fairly, we will do everything in our power to ensure that you get your money's worth, and perhaps most importantly, we will provide you with the opportunity to have your cows bred. Period. We hold ourselves to a high customer service standard, and we hope that you will hold us to those same standards as well. With that being said, we are extending to you a very fair and very honest guarantee, in writing no less. For those of us in the beef industry, it is no secret that acquiring the right genetics that will prove to be profitable and effective when breeding, can tie up a good bit of capital in the beginning all to try and justify the investment. Southern Cattle Company has researched and studied many industry guarantees, and we stand behind our offer as it is what is fair for both parties, the customer/buyer making the investment as well as the breeder/Southern Cattle Company doing its best to provide the best genetic package available with a sustainable guarantee.

Guarantee:

Please consider insurance on your investment. It's very affordable, and it can give you coverage above and beyond what we can guarantee. We can assist you with obtaining insurance, should you choose this option.

- Example coverage: Full "all Risks" of mortality for death from Natural causes or humane destruction because of a life-threatening injury. The endorsement for Accident, Sickness & Disease (ASD) Infertility provides coverage in the event of permanent impotency, infertility or inability of the bull to naturally service cows because of an accident, sickness, or disease sustained during policy period.

Southern Cattle Company 3-Year Guarantee:

- All Consolidated Genetic Solutions/Southern bulls that sell for over \$4,000.00 and fail to pass a breeding soundness exam due to infertility, feet or leg structural soundness, broken penis (Note: full coverage in single bull breeding pastures and 50% prorated coverage for broken penis, broken legs, and other injuries on Multi-sire breeding pastures), will be guaranteed for 3 years from time of sale prorated. Note: guarantee will be satisfied as credit to our next bull sale and not redeemable in cash, however should we have an acceptable replacement in inventory slotted as a private treaty bull and the purchaser need one prior to the sale this could be an option if both parties agree.
 - Example: First year 100% less salvage value, second year 67% less salvage value, and third year 33% less salvage value. On all bulls over \$4,000.00.
 - All bulls offered are sold as satisfactory potential breeder by our DVM.
- This guarantee does not cover any negligence, mismanagement, disease, or act of God.
- All guarantees must be examined by a veterinarian and a detailed vet certificate must be supplied by the purchaser to the seller at the time of prognosis. Note: Southern Cattle Company reserves the right to have a bull's semen/fertility rechecked by one of our approved vets.

SO, YOU BULL BUYERS STILL LOOK AT ACTUAL WEIGHTS?

By Dr. Jerry Lipsey, former EVP, American Simmental Assn.

Every year, in every herd, environmental factors (almost always weather and climate) affect the actual weights of cattle. I don't care when you record the weight; birth, weaning, as yearlings or later in life the impacts of temperature and related feed availability have huge effects on weights. Knowing that, can you believe there are still cattle producers who use weight records vs. EPDs and indexes to make selection decisions?

Each year there are regions of this nation that experience drought often accompanied by excessive heat. I can guarantee the raw weights of cattle in every age class are greatly reduced in these areas. Birth weights in those regions will be greatly reduced compared to areas that had cooler weather and more rainfall. Weaning weights too in areas of drought are greatly depressed unless owners "pony up" big bucks for supplemental feed. Even with the reduction in reported weights, the DNA for potential birth and weaning weight remains unchanged.

Neither prudent, nor exceptional care effects that potential either. Anyone can creep feed or provide either practical or generous nutrition to their cowherd, but it does not impact EPDs. I have heard plenty of bull buyers say, "I won't buy a bull unless he has a big weaning weight." Those folks have made a resolution to require some magic weaning weight of the young sires they purchase. Go ahead and enjoy spending dollars on a measurement that potentially has no impact on your genetic progress or enterprise profit. That big weaning weight achieved by your herd bull may be no reflection at all of his genetic makeup. Since we are nearing the end of summer the following comments relate to genetic improvement and dealing with hot dry weather.

Thermal heat stress of cattle caused by hot, humid weather, endophyte toxicity (such as fescue) or both, have very large impacts on calf and body weights. Reduced forage availability and even reduced forage quality have much the same effect. From a seedstock production standpoint however, neither of these impact the genetic worth and breeding potential from the reduced weight calf crop at all.

There still remain cattle producers who diligently search for "high performers" even in environmental situations that make them very difficult to find. That said, we absolutely salute everyone who finds and selects seedstock that have advanced genetic merit. We just regret the wasted effort, time and money spent on the ineffective tunnel vision focus on raw cattle weights as an obsolete tool to find those cattle. EPDs have long since replaced actual weights, adjusted weights and even weight ratios as "best predictors" of genetic worth.

The members of the American Simmental Association know the facts of measuring and comparing genetic values. Not until the weight data are entered into our genetic evaluations resulting in up-to-date EPDs, do we make good decisions about true breeding values. Without doubt there will be calves, particularly in challenging environments with unimpressive actual weights and yet their Weaning Weight EPDs will be superior to some calves with maximum available nutrition and more much more impressive actual weaning weight data. The truth is that most cattle producers already know these details. They don't become distracted looking at birth, weaning and yearling weights. They know that EPDs are their "protection insurance" from purchasing cattle with misleading weights. For example, an animal with a 75 pound birth weight, born in the fall after a long hot summer in the southern US might have considerably less calving ease and reduced birth weight potential than a 95 pound calf born in the north after a long cold winter to a cow that received substantial supplemental nutrition. Along the same line, it is impossible to compare actual yearling weights from cattle developed on grass to those fed in a feedlot. The weights alone do not tell the real genetic story. Only EPDs provide a clear, environment-free measurement of genetic worth.

For nearly three decades we have explained the advantages of using EPDs vs. weights, adjusted weights and/or weight ratios to select valuable seedstock. There is little doubt the proof of their impact on the beef business has been large and positive. Now, science is now marching even farther along, farther past the antiquated use of raw weight data as we enter the era of selection using designed indexes. Simply by summing the market worth of every EPD trait and knowing how those traits affect both costs and income, we can estimate how an animal's genetics will impact the economic bottom line of the cow herd enterprise.

ASA's All Purpose Index (API) reflects the summation of every EPD on potential costs and production value. Considering everything from calving ease to growth to cowherd lifetime feed costs, maternal longevity and even carcass value, API works as a cutting edge tool to really simplify seedstock selection. Terminal Index (TI) too can be a great profit selection tool for those that plan to sell all of the calves and not keep daughters. Average SimAngus and Simmental API values are currently +\$122 and it takes around +\$135 to get in the top 20% of the bulls available in the breeds, so remember to use all of the tools and buy carefully.

GATEWAY SIMMENTAL

Decades of selection for profit driven genetics anchors the Butcher program and is one of the reasons why their tenure in the SimGenetic seedstock business has been so successful. With nearly 50 years of experience you can absolutely count on the common sense approach to cattle breeding and customer first philosophy that has given them so much longevity.

Gateway Simmental was among the first herds in this nation to embrace the concept of SimAngus composited seedstock production on a large scale. They understood that their customers needed a simplified way to enjoy the proven profitability that comes with using heterosis. Offering composites built around the two largest and highest reputation databases in the world just made sense. Then by seeking out the greatest genetics these two sources had to offer and combining them, a product could be designed that exceeded the potential of either used alone. The product of their efforts are cattle with direct calving ease, mature cow size and marbling prowess of the very front end Angus with the efficient growth, maternal calving ease, muscling and longevity of the best Simmental genetics. Here you will find all of those things in an easy to use composited package with hybrid vigor built right in. Because of their long term commitment to maternal genetics in a package that provides real value up and down the beef chain you can expect to see most of the Gateway offering in the top 10% or higher for the \$API proven profit index.

Phenotypically we have all been impressed with these cattle and the way they have acclimated to climate and forage during their year-long development in Florida. We understand that finding cattle with this level of calving ease and carcass value in an easy fleshing, easy doing package is not always easy, but this group will absolutely change your mind about what is possible.

Thank you to Jim, Lynn, the whole family and the great crew at Gateway Simmental for their confidence in our programs.

THE JIM BUTCHER FAMILY

TRIANGLE J RANCH

Founded in 1887, Triangle J Ranch is one of the oldest continually operated family ranches in the Midwest. Darby Line and his family have a real commitment to long term thinking and a business philosophy for the cattle operations that are two of the good reasons why they have been successful for so long. One tour of the operations 1000 plus seedstock cows and you will get a great picture of their goals and priorities. Make a great cow first! Pasture after pasture of consistent type, fertile, high performing females with wonderful udder and foot quality is proof of their efforts. Perhaps that's why the crowd at their annual January bull sale is so large and active each year. Long term satisfied customers who understand that by consistently using Triangle J bulls their cowherd ultimately will be as solid as Darby's.

Performance too is a strength of the Triangle J program. Heavy weaned calves followed by great feedlot performance makes Triangle J genetics highly sought after by feeder buyers. Expect to find a little more size and stretch in these bulls and uncommon growth efficiency. Just take a look through their list of popular produced AI sires like TJ Makers Mark, TJ Sharper Image, TJ Power Grid, TJ Cornhusker, TJ Main Event, TJ Cowboy Up and TJ Z54 "Maverick" and you will find top 1% to 5% ranking for improving Weaning Weight genetics for all of them! Maximum pay-weight with conservative birth weight genetics and proven cow herd builders. Those are the hallmarks of the Triangle J program.

We hope you will be impressed with the look and quality of the bulls provided by Triangle J Ranch. This is an un-sorted group right off the top of the later born bull calf crop at the Line's. Too young to make it for their very early spring bull sale, they were a perfect choice for a slower, forage based development program to make big, strong 18- 20 month old bulls for a fall sale. Thank you to the folks at Triangle J Ranch for their confidence in our partnership program.

THE DARBY LINE FAMILY

THOMAS ANGUS RANCH

In 1950, Bob Thomas's purchased his first cow/calf pair for \$475 and his first herd bull selection for \$300. From that humble beginning, the Thomas Angus Ranch program has grown into one of the largest and most successful in this country. Their story includes a history of constantly improved genetics, successful sales, expanded operations and best of all hundreds of loyal and satisfied customers. Those are just a few of the reasons all of the folks at Consolidated Genetics are so glad to have them as partners in this first bull development and sale. The idea has always been to include the best as partners, maximize the quality of genetics available and thus maximize the probability of success. When you look through the great Angus bulls from the Thomas program that are in this offering we are confident that you will see proof of value in that plan.

Like the rest of the 18 month and older bulls in this first offering, these bulls have spent the past year developing slowly through all the environmental challenges the Southeast has to offer and have come out strong and in perfect condition to go to work. Calving ease, maternal and carcass genetics that are recognized throughout the US cattle industry, these Thomas bulls will add value to your feeder cattle and cow herd for years to come. You too will appreciate the uniformity and disposition as important added genetic features of this Angus offering.

The Thomas program currently ranks among the top 25 largest seedstock producers in North America and has been honored to have been named a past Seedstock Producer of the Year by the Beef Improvement Federation. Thanks to Rob, Lori and the rest of the Thomas Angus team for their support through the process of preparation for the Consolidated Genetics inaugural event. These will be some of the very best Angus genetics available in the Southeastern US this year.

We are blessed to be working with some of the absolute best SimAngus breeders in the country. I know that as you look through this offering, you will find that to be true as well. In my opinion, these SimAngus Bulls are as good of hybrid bulls as you could find anywhere, bottom line. I don't think that I need to preach about all the advantages to crossbreeding, nor about the use of SimAngus genetics, but I would like to point out a few specifics about this particular offering that set us apart from 99% of all others available. For one, please note that because of the disciplined approach and pressure put on these cattle over several generations, they will rival straight breed cattle in terms of convenience traits, performance, as well as carcass merit while still providing you with the proper amount of heterosis. To put it simply, the steers will weigh up at weaning, gain and grade, and the heifers will be the keeping kind. Because of who we have chosen to co-op with, we have available for sale November 26th, bulls that will do everything that has made crossbreeding so important to the beef industry. They will be able to maintain profitability, and rest assured, that there is no one who does produces these SimAngus bulls better than the breeders behind these bulls.

As I evaluated these bulls over the last year, I have appreciated several individuals, and although it was a hard choice with the quality represented, I feel in this offering I want to lead off with some really good prospects out of the TFS Due North sire group. He has done a lot of things right within this set of bulls, and I feel that the Due North sons should be on your radar as you sort these cattle.

BALDRIDGE WAYLON W34 Sire of Lots 118-137.

I feel I am not alone when I say: it's hard to deny that most of the good cattle, by any standard, have at least some Angus in them. With that being said, why wouldn't you source your Angus genetics for however you're intended use from the very best breeder available? Some would say that they must sacrifice because of geographic region, or because of the risk involved with moving young bulls across the country, but those are issues Southern Cattle Company has tackled. On November 26th, we are proud to offer for sale, Angus bulls out of a cow herd that is known for its maternal strengths and adaptability, worldwide. The cows behind these bulls are the "who's-who" in the Angus industry. You can go to any of the other top programs in the nation and see the influence that the Thomas Angus Ranch has made. Most of these bulls are straight out of an extensive embryo transfer program; therefore, they offer the most current genetics and sought after pedigrees available. Not to mention the fact that, you can put together full brothers or bulls that are at the very least, bred extremely similar to use on large groups of cattle in a multi-sire group or individually to create an extremely uniform set of calves for sale or replacement heifers. These bulls have either been raised in the Southeast or been with us for the last year. They are acclimated, and are ready to infuse some of the best Angus genetics into our Southeastern region or wherever you should choose to haul them.

As we studied our Angus offering, we felt that out of some very competitive sire groups that we are going to start the division with the sons of Baldridge Waylon W34. I really like the Waylon bulls and what they have to offer. We know that as you get to evaluate this offering, you will agree.

18+ MONTH OLD CHAROLAIS BULLS

M6 COOL REP 8108 ET Sire of Lot 196.

SOUTHERN COOL REP 45579 Sells as Lot 196.

Mr. John Downs is no stranger to the Charolais world, and Southern Cattle Company has been synonymous with quality Charolais cattle since its inception decades ago. Although we haven't been actively having a bull sale the last few years, make no mistake that our Charolais cattle are second to none! Without a doubt, the front end of this offering could satisfy the most discriminating Charolais breeder. Also, please take note that we have a few older bulls available in this sale if you should need something to cover a few additional cows right off the bat. We have continued to use embryo transfer to produce the best in Charolais genetics, and we feel that our Charolais cowherd is as strong as it has ever been. I am confident that you will find what you need in terms of quality and power in this lineup. Use these bulls in a terminal breeding program to mash down the scales, or on some Angus/Brangus type cows to make the ever popular smoky heifers that work so well in the Southeast. At Southern Cattle Company, we are poised to launch an aggressive breeding plan to bring you top notch Charolais genetics on a large scale for years to come. We look forward to showcasing our Charolais bulls at our November 26th sale.

M6 Cool Rep 8108 ET is a bull that is working well for us at Southern Cattle Company, and he is the sire of the bull we have chosen to lead off with this year, Southern Cool Rep 45579.

ALLIED GENETIC RESOURCES

Allied by reputation and focused on service has been our motto at Allied from the start. With that charge always in mind, Allied has come a long way in just a little over 5 years. The membership has grown, the staff and ability to provide services have grown and most importantly the reputation has grown across the beef industry. Successful and customer focused seedstock producing professionals are at the core of the Allied ownership and Allied's mission was and has been to offer value and profit enhancing services for that special group of experienced breeders and their commercial customers. You will make a great choice sourcing genetics from one of our owner herds. Now take the next step and contact Allied for options that make good sense for the future.

MARTY ROPP – Genetic Consulting and Seedstock Procurement. With nearly 20 years of experience in the SimGenetics and commercial genetics business you can count on real world options and solutions. Take the guess work and hassle out of bull selection and buying by giving Marty a call at 406-581-7835.

CLINT BERRY – Feeder Cattle Marketing Specialist and Superior Livestock Representative. Clint has built a team of committed marketing professionals prepared to offer value adding solutions across the US. Looking for a better way to market your calves in 2016, call Clint at 417-844-1009.

GARRETT THOMAS – Sale Management Services. Sale preparation and execution for both commercial and seedstock sales are Garrett's specialty. Call Garrett for honest, profit proven sale services at 936-714-4591.

ANDREW CONLEY – Southern US Commercial Specialist. If you produce cattle south of the Mason Dixon Line and need experienced help with seedstock procurement and or commercial marketing, Andrew is your best resource. New to our team in 2016, his experience will make the difference at 706-781-8656.

ROCKY FORSETH – Commercial Customer Service Specialist. Rocky brings a life spent in the commercial cattle business. Contact Rocky for access to all Allied services including feeder cattle marketing and support of commercial genetic improvement programs. His practical approach, willingness to listen and enthusiasm for this industry are great additions for Allied. 406-590-7894

WOW! Genetically, it would be hard to get any better than this set of Hereford Bulls. The Hereford offering this year may not be the largest in terms of numbers when compared to the other breeds in this years Consolidated Genetics bull sale, but look at the ones we have. The influence of TH 7N 45P Rita 71U who is on my short list for best cow of the whole breed runs deep. 71U is without a doubt one of the highest income-earning cows in recent history with millions of dollars in total sales collectively. 71U is the dam of one of the most popular bulls in the breed, TH 71U719T Mr. Hereford 11X. He is siring some of the best cattle available today and we have several 71U sons and Grandsons available in this offering. 71U is also the dam of our up and coming donor, TH 71U17Y Rita 403A who is one of the great young females in the breed and has already produced arguably one of best Hereford bulls to sell last year. A direct son 403A is available at this sale, and is also extremely good. In addition to the 71U cow family, we have sons selling out of our full-bodied power donor Boyd Holly 901. She is a full sister to AI stud bull Boyd Masterpiece Q220 and needs no introduction amongst Hereford enthusiast. I can't possibly express in writing, the full genetic value that one could benefit on a set of Hereford cows with the purchase of the right bull out of this offering. Not to mention, should you want to make some black baldies or super-baldy replacement heifers, why not use some of the best cow families in the Hereford breed – it just makes sense!

AMERICAN ANGUS ASSOCIATION EPD DEFINITIONS

EXPECTED PROGENY DIFFERENCE (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an “I”, and may or may not include the animal’s own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

EPDs are enhanced by genomic profiles generated by Zoetis and GeneSeek, when applicable.

\$Value Indexes, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

PRODUCTION

- **CALVING EASE DIRECT (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire’s calves will be born when he is bred to first-calf heifers.
- **BIRTH WEIGHT EPD (BW EPD)**, expressed in pounds, is a predictor of a sire’s ability to transmit birth weight to his progeny compared to that of other sires.
- **WEANING WEIGHT EPD (WW EPD)**, expressed in pounds, is a predictor of a sire’s ability to transmit weaning growth to his progeny compared to that of other sires.
- **YEARLING WEIGHT EPD (YW EPD)**, expressed in pounds, is a predictor of a sire’s ability to transmit yearling growth to his progeny compared to that of other sires.
- **RESIDUAL AVERAGE DAILY GAIN (RADG)**, expressed in pounds per day, is a predictor of a sire’s genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.
- **YEARLING HEIGHT EPD (YH)**, is a predictor of a sire’s ability to transmit yearling height, expressed in inches, compared to the that of other sires.
- **SCROTAL CIRCUMFERENCE EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.
- **DOCILITY (DOC)**, is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire’s calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

MATERNAL

- **MATERNAL MILK EPD (MILK)**, is a predictor of a sire’s genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf’s weaning weight attributed to milk and mothering ability.
- **COW ENERGY VALUE (\$EN)**, expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

- **CARCASS WEIGHT EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire’s progeny compared to progeny of other sires.
- **MARBLING EPD (MARB)**, expressed as a fraction of the difference in USDA marbling score of a sire’s progeny compared to progeny of other sires.
- **RIBEYE AREA EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire’s progeny compared to progeny of other sires.
- **FAT THICKNESS EPD (FAT)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire’s progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

- **WEANED CALF VALUE (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.
- **FEEDLOT VALUE (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.
- **GRID VALUE (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.
- **BEEF VALUE (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

For more information on how to use this information in your breeding program, visit the American Angus Association website:
www.angus.org

EXPECTED PROGENY DIFFERENCES (EPDS): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing in what units they are expressed. For example, if the above case referred to weaning weight EPDs, sire A would be expected to sire 15 pounds more weaning weight than sire B. If calving ease was the trait, sire A would be expected to sire 15 percent more unassisted births in first-calf heifers; in other words, if sire B sired 30 assists in a group of 100 heifers, we would expect sire A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit www.simmental.org.

Listed below are the units in which ASA EPDs are expressed:

ALL-PURPOSE INDEX (API): Dollars per cow exposed under an all-purpose-sire scenario. (See \$ Indexes for more details.)

BACK FAT (BF): Inches of carcass backfat at 475 days.

BIRTH WEIGHT (BW): Pounds of birth weight.

CALVING EASE (CE): Percent of unassisted births when used on heifers.

CARCASS WEIGHT (CW): Pounds of carcass weight at 475 days.

DOCILITY (DOC): Percent of offspring receiving a disposition score of 1 (docile).

MATERNAL CALVING EASE (MCE): Percent of unassisted births in first-calving daughters.

MILK (MLK): Pounds of weaning weight due to milk.

MARBLING (MARB): Carcass marbling score at 475 days.

MATERNAL WEANING WEIGHT (MWW): Pounds of weaning weight due to milk and growth.

RIBEYE AREA (REA): Square inches of carcass ribeye at 475 days.

TERMINAL INDEX (TI): Dollars per cow exposed under a terminal-sire scenario. (See TI for more details.)

WEANING WEIGHT (WW): Pounds of weaning weight.

YEARLING WEIGHT (YW): Pounds of yearling weight.

YIELD GRADE (YG): Carcass yield grade score at 475 days.

\$ INDEXES: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide pieces of the economic puzzle. This is where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on integrated commercial production. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

ALL-PURPOSE INDEX (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

TERMINAL INDEX (TI): Evaluates sires for use on mature Angus cows with all offspring put on feed and sold grade and yield.

USING API AND TI: First, determine which index to use; if you are keeping replacements use API, if not, use TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years ($\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed.

For more detailed information about EPDs and \$indexes, visit: www.simmental.org

Important disclaimer: DO NOT compare index values of purebreds of different breeds, hybrids of different breed composition or purebreds with hybrids — our system was not developed to make valid comparison among these groups. Therefore, you must first determine the breed and breed composition appropriate for your herd and use index values to compare animals within that population.

AMERICAN INTERNATIONAL CHAROLAIS ASSOCIATION EPD DEFINITIONS

Cattle Evaluations use the term Expected Progeny Differences (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait relative to other sires in the analysis. The key word is “difference”. The EPD itself does not imply “good” or “bad” performance. But rather, the EPD gives a prediction of the average difference to expect in the performance of a sire’s progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured.

Each EPD reported is accompanied with an Accuracy (ACC) value. ACC is a measure of reliability regarding the EPD evaluation for a performance trait. Accuracy is reported as a decimal number between zero and one: large values indicate greater accuracy and more certainty the EPD will show little change as additional progeny information is obtained.

BIRTH WEIGHT EPD (BW) The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

CALVING EASE DIRECT (CE) is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire’s calves will be born when bred to first-calf heifers.

CALVING EASE MATERNAL (MCE) is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire’s daughters will calve as first-calf heifers when compared to daughters of other sires.

WEANING WEIGHT EPD (WWT) The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

YEARLING WEIGHT EPD (YWT) The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

MATERNAL MILK EPD (MAT) The genetic ability of a sire’s or dam’s daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

TOTAL MATERNAL EPD (TM) A value to predict the weaning weight performance of calves from a animal’s daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

SCROTAL CIRCUMFERENCE EPD (SC) The expected difference in scrotal circumference (expressed in centimeters) of a bull’s or dam’s male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

CARCASS WEIGHT EPD (HCW) Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds and is a predictor of the differences in hot carcass weight between parents progeny at an age constant endpoint.

RIBEYE AREA EPD (REA) Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches and is a predictor of differences in ribeye area between parents progeny at a constant age endpoint.

FAT THICKNESS EPD (FAT) Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection base on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches and are a predictor of differences in fat thickness between parent’s progeny at an age constant endpoint.

MARBLING SCORE (MARB) Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent’s progeny at an age constant endpoint.

TERMINAL SIRE INDEX (TSI) The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) – BWT, WWT, YWT, REA, HCW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

The TSI represents a dollar index per terminal progeny produced for a bull in the AICA database, ranking them for profit potential. This dollar index is to be interpreted much like single trait EPD. For example, if Sire A’s index is \$191.66 and Sire B’s index is \$200.00, then we would expect Sire B’s offspring to average \$8.34 more net return (\$200.00 minus \$191.66) than Sire A’s offspring.

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 15 traits and calculates four profit (\$) indexes. Research is ongoing to develop traits for fertility, feed intake and docility. Today, DNA-marker tests can be used to enhance the accuracy of Hereford EPDs. AHA blends marker information with phenotypic information and pedigree to produce a GE-EPD. The current suite of Hereford EPDs and \$ indexes includes:

CALVING EASE – DIRECT (CE) CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age.

BIRTH WEIGHT (BW) BW EPD is an indicator trait for calving ease and is measured in pounds.

WEANING WEIGHT (WW) WW EPD is an estimate of pre-weaning growth that is measured in pounds.

YEARLING WEIGHT (YW) YW EPD is an estimate of post-weaning growth that is measured in pounds.

MATERNAL MILK (MM) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability.

MATERNAL MILK & GROWTH (M&G) Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is sometimes referred to as "total maternal" or "combined maternal."

MATERNAL CALVING EASE (MCE) MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage.

SCROTAL CIRCUMFERENCE (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

CARCASS WEIGHT (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

RIB FAT (FAT) The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

RIBEYE AREA (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MARB) MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

BALDIE MATERNAL INDEX (BMI\$) BMI\$ is a maternally focused index that has a production system based on 1,000-Hereford x Angus females with a progeny harvest endpoint directed toward Certified Hereford Beef (CHB®). This index is more critical of CE than the Brahman Influence Index (BI\$) and also has significant weight on fertility. There is positive weight on WW and a slightly negative weight on YW, which promotes early growth and then a slow down on growth to keep mature size manageable. The emphasis of IMF is greater than the emphasis of REA. This is true because of the price difference of the Choice-Select spread and the fact that there is very little incentive to produce cattle better than a Yield Grade 3. This index is geared to service any commercial program that has Britishcross cows.

CALVING EASE INDEX (CEZ\$) This is a general purpose index that focuses on identifying bulls that can be used on heifers and then ultimately the calves will be marketed through the CHB program. As you might expect, CE and MCE carry significant weight in this index along with fertility. There is very little weight put on growth traits and less emphasis on carcass. Remember, this is a general index that is specifically designed to be used in a heifer program.

BRAHMAN INFLUENCE INDEX (BI\$) BI\$ is a maternally focused index that is based on a 1,000-head cow herd of Brahman x Hereford cows. The progeny for this index will be harvested in a commodity-based system since CHB does not accept Brahman-influenced cattle into the program. This index has less emphasis for CE than any of the other indexes. There is emphasis on both REA and IMF since the cattle will be harvested through a commodity market. The largest emphasis is in fertility, which is measured solely by SC at the present time. Obviously, the target for this index is the producers in the Southern regions of the U.S. where the bulls are typically sold to commercial cattlemen that have Brahman-influenced cow herds.

CERTIFIED HEREFORD BEEF INDEX (CHB\$) This is a terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CE and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. It could be used heavily in the Midwest where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or are simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.
