Selling 5% semen shares which will include 20 units of semen per year, \$2,500 per share which entitles share owners to 5% of LFL Dividend's net revenue from future semen sales. We will not release semen on the open market until spring of 2019. Dividend is a maternal sib to the 2015 and 2016 high-selling females in the National Sale and a maternal sib to the NWSS Reserve Grand Champion Pen of Lim-Flex Bulls in 2017. His sire MAGS Aviator is currently one of the most popular sires in the breed! His dam is the most consistent cow at Lawrence Family Limousin. Dividend ranks in the top 35% in 11 of the 16 traits, including the top 4% for TM, 5% for WW and 10% for YW. Dividend backs these numbers with his adjusted performance of 77 BW, 747 WW and 1,491 YW.

CONSIGNED BY: LAWRENCE FAMILY LIMOUSIN, ANTON, TX

Elena is a maternal sister to LFL Cherry, the Reserve Supreme Grand Champion Heifer at the 2017 Star of Texas Show and the 2017 Grand Champion open show for Madison Culpepper! Elena is extra deep in her lower rib shape and bold sprung in her upper rib as well. She is exceptionally sound in her skeletal design as well as larger than average in her foot size! She ranks in the top 15% for both CD and MK. If you want a chance to get a picture at the backdrop with a purple banner, Elena has that potential!

Elsie is a maternal sib to the 2015 and 2016 high-selling females in the National Sale in Denver as well as the Reserve Grand Champion Pen of Lim-Flex bulls in 2017 at the National Western Stock Show. Her dam is one of the most consistent cows we have at Lawrence Family Limousin. Her sire, TMCK Architect, is earning much respect within the Limousin breed as his first daughters have weaned their first calves. Elsie ranks in the 25% in 8 of the 16 traits NALF ranks including the top 1% for WW and TM, 3% for YW, 10% CW and SC, and 15% for MK. If you are looking for cow power after a successful show career Elsie is one to tie to! Selling one-half interest with the option to double up.

BW: 66 • Adj. WW: 520

CONSIGED BY: STOWERS LAND & CATTLE, BRIDGEPORT, TX

SSTO Elsa 700E is a homozygous black, homozygous polled daughter of MAGS Aviator, the syndicated son of Winston and high seller at the 2014 Magness sale. He combines stylish phenotype and tremendous performance into a stellar package. He sires offspring that are calving-ease oriented and sound structured. Her dam, SSTO Ageless Beauty is out of the famed, MAGS Manuela cow. This January female is about as complete as they come. She is near perfect in her angles and we love the set to her hind leg. She is long spined, deep ribbed and soft in her lines. She ranks in the top 15% of the breed for marbling, which will improve carcass profitability in any program. With SSTO Elsa 700E in your pasture, you won't be able to ever 'Let her go.'

PE'd 6/1/17 to 7/15/17 to MAGS Bronson.

SSTO Daphne 6855D is a 31% Lim-Flex female out of MAGS Zincograph, a MAGS Xyloid son and maternal brother to MAGS Unloosen, the Fosdick herd sire who was the 2009 Supreme Champion at the All-American Limousin Futurity. Zincograph is homozygous black, homozygous polled and has ultrasound numbers—UREA ratio of 110, UFAT ratio of 81.6 and UIMF ratio of 104.1. In our opinion, these carcass traits combined with his phenotypically superior pedigree make him a true asset to our program. On her dam's side, she goes back to Dixie Erica of RR 7530 and on Zincograph's

LOT 9

side, GAR Precision. Quality runs deep in this female's pedigree. She has an ultra cool look when profiled and she's incredibly deep sided. She stands on a great amount of bone, is super sound structured when on the move and level from hooks to pins.

A unique opportunity to share in some high-quality, predictable genetics from some of the breeds finest. LH Belle 015B took the breed by storm in the fall of 2015 into the spring of 2016—being selected grand champion in the junior and open shows at the NAILE, grand champion junior Lim-Flex and open show at the 2016 NWSS, grand champion at the FWSS, and finally supreme champion heifer at the OYE in Oklahoma City. Mated to CJSL Creed 5042C, the Aviator son who topped the 2016 Linhart sale going to Tubmill Creek Farms is a can't-miss combination. Guaranteed at least one pregnancy if implanted by a certified technician.

Using Limousin & Lim-Flex® EPDs to Aid Selection

The North American Limousin Foundation (NALF) uses all available information to predict an animal's EPD. This information includes: individual performance, pedigree, progeny and grand progeny performance, and genomic information. All this information is combined into one, easy to use, number that helps producers make genetic improvement in their herd.

Since the spring of 2015, NALF joined 11 other U.S. and Canadian breed associations to form the largest international multi-breed cattle evaluation in the world through International Genetic Solutions (IGS). This allows growth and carcass EPDs for Limousin and Lim-Flex® (Limousin x Angus hybrid) animals to be directly compared with Red Angus, Simmental, Gelbvieh, Shorthorn, Maine Anjou, and Chianina animals (and all their hybrid animals). This makes selection decisions easier for commercial producers.

Listed below are the definitions for Limousin and Lim-Flex EPDs and the units in which they are published. For more information visit www.NALF.org or call 303-220-1693.

Maternal and Growth Traits

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease.

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Milk (MK): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. A greater TM value means a mother that returns comparatively higher weaning weights on her calves. $TM\ Index = MK\ EPD + \frac{1}{2}\ WW\ EPD$.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease.

Scrotal circumference (SC): Is a good indicator of age at puberty, and is a highly heritable trait. EPDs for scrotal circumference are expressed in centimeters, with higher values indicating genes for larger yearling scrotal circumferences of sons and earlier puberty of daughters.

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six year of age. The stayability EPD is one of the best measures currently available to compare a

bull's ability to produce females with reproductive longevity.

Docility (Doc): Predicts genetic differences in the probability that offspring are scored a 1 (docile) or 2 (restless) as opposed to 3, 4, 5 or 6 (nervous to very aggressive). Higher EPD values for docility represent genetics for calmer behavior.

Carcass Traits

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib. Smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Mainstream Terminal Index (\$MTI): Predicts genetic differences in profit per carcass by combining the potential for and value of post-weaning growth, quality grade and yield.

The Value of Genomic-Enhanced EPDs

Limousin breeders and their commercial customers benefit greatly from new breeding and selection tools. The North American Limousin Foundation (NALF) has been publishing genomic-enhanced EPDs (GE-EPDs) since the fall 2015 international cattle evaluation. This provides GE-EPDs for all Limousin and Lim-Flex® animals that have completed DNA testing for genomic profiles.

GE-EPDs provide more precise EPDs based on a combination of pedigree, phenotype, and DNA. One major benefit is risk reduction through increased accuracy value on many traits - equivalent to having 8-20 progeny. This saves time when assessing young breeding stock and delivers commercial customer confidence when buying seedstock.

GE-EPDs also give the chance to collect data on economically important traits, which are expensive or difficult to measure.

The information from the genomic data can be as informative as a bull's first calf crop or a cow's lifetime production record. Since the genomic data is incorporated directly into the EPDs, cattle producers will not have to learn how to interpret the new data.

Animals that are genomic-enhanced will have the NALF GE-EPDs displayed on their animal detail screen and performance reports in the NALF-DigitalBeef platform. Traits that are genomic-enhanced are highlighted in yellow on these reports. Also, look for the GE-EPDs logo on animals, and in ads and sale catalogs.

Effective progeny counts for interim EPD derived from differing combinations of pedigree, performance and genomic data
