SALE SCHEDULE

FRIDAY, NOVEMBER 11

4:00 p.m. Sale Cattle Preview

SATURDAY, NOVEMBER 12

10:00 a.m. Sale Cattle Preview

Noon Complimentary Lunch

1:00 p.m. Thomas Farms Sale

TERMS & CONDITIONS:

Terms of the sale are cash unless satisfactory credit arrangements have been made prior to the sale. A representative will be on hand sale day if you wish to insure your purchases. Please note: All persons who attend the sale do so at their own risk; Sale Management or Consignor do not assume liability, legal or otherwise, for any accidents which may occur.

ANNOUNCEMENTS:

Announcements made sale day by the owners or auctioneer take precedence over statements in this sale catalog.

TRUCKING:

Trucking will be available.

GUARANTEE:

All cattle sell under the standard guarantee of the North American Limousin Foundation.

WELCOME

It is our pleasure to be associated with the Thomas Farms Production Sale.

Rick and Sandy Thomas of Thomas Farms in Leslie, Arkansas, have been fixtures in the Limousin breed for more than 40 years. In that time, they have developed a no nonsense approach to breeding registered Limousin cattle. The females are expected to perform under a wide variety of environmental elements and their bulls continue to make positive influences in both commercial and seedstock herds around the country.

As you study this catalog, you will notice that Rick and Sandy have spared no expense when it comes to bull power. The bulls they have selected to cover the natural breeding duties at the farm are of AI quality and that statement is verified when studying the cattle available in this offering. The females offered in the sale are youthful and backed by multiple generations of Thomas Farms breeding. The bulls are stout, docile and developed in such a manner that the new owners should get years of worry-free use from them.

It should come as no surprise that Rick and Sandy are tremendous stewards of both their Limousin genetics and the land in which they graze. They operate their program with the utmost integrity and attention to detail. As you would expect from a program of this caliber, all of the I's have been dotted and the T's crossed. DNA testing has been done where necessary and that information, along with updated breeding information and bull breeding soundness exams will be made available as sale time draws closer.

It is impossible to operate a top-tier seedstock program for 40 years without outstanding customer service and Rick and Sandy are a prime example of this. Should you have any questions prior to the sale regarding the breeding or management of these cattle, Rick or Sandy would be more than happy to field your phone calls.

We feel fortunate to be working with such an exemplary couple and would like to take this opportunity to invite each and every one of you to this event. If we can be of any assistance to you prior to or the day of the sale, please do not hesitate to contact us or any member of the sale team.

Regards,

KILEY MCKINNA

NOVEMBER 12, 2022 • 1 P.M. CST

Welcome to the Thomas Farms Production Sale!

We are honored by your interest in Limousin cattle and thank you for your participation in our Production Sale.

Limousin cattle have been producing productive beautiful cattle on our ranch since 1981. They are expected to pull their own weight. Our breeding program has been and still is intentional, producing beef cattle to serve today's cattlemen. The genetics we use are purposeful and designed to produce animals correct in their build—good, deep, long, well-muscled with good dispositions.

Our females breed on time, birth easy, milk and raise a calf to a good weaning weight. The genetics finish it off with good yearling weights. Simply said they are the keeping cattlemen's kind.

We put this production sale together to include several excellent young pairs. These young females, many are first calf heifers, have raised very nice calves. There are several show heifer prospects in this group of weaned calves. The bull calves are great herd sire prospects. The sires of these calves have been selected to make them as good as they can be.

Their dams are AI'd back to the list of sires in the reference sire section of the catalog. Many of the sires are not yet available on the open market, making this a great opportunity to add sought after genetics to your program.

The bred heifers were AI'd, followed by pasture exposure to the best herd sires available. The exception being three red heifers bred intentionally to our elite junior herd sire, DAHN Johnny Walker 11J, a member of the Reserve Champion Limousin Pen of Three Bulls at the 2022 Cattlemen's Congress in Oklahoma City. All females in the sale are bred to have a spring of 2023 calf—except of course, the weaned heifer calves.

The bulls in this offering are sound and ready to be herd improving herd sires. All are fertility checked and fully guaranteed in accordance with the North American Limousin Foundation. Commercial cattlemen tell us our bulls add 100 pounds to their calves. That's what we like to hear!

All cattle in the sale are Purebred Limousin or Lim-Flex with one Fullblood bull in the offering. DNA test results should be ready by sale on select animals for color and polled. A supplement sheet will be available to provide additional information we gather between catalog production and sale day.

All Polled . . . Red and Black . . . All Registered . . . Limousin and Lim-Flex . . . All carry our tattoo—ARSN.

We feel there is something here for everyone. There are high quality animals for all price points. The cattle will be displayed in pens at the sale facility and auctioned off on video screens in the ring sale day. If you can't make it sale day our professional management team is ready to assist you, including the sale consultants listed in the catalog. Bidding can also be done online during the sale at LiveAuctions.TV.

If needed, we are more than happy to assist you with trucking arrangements following the sale.

This is a perfect opportunity to build or add to your cattle program. Purchase with confidence from one of the longest running Limousin breeders in the country.

May God bless you all and bless your herds that they may thrive and give you many years of pleasure.

God Bless America.

Using Limousin & Lim-Flex® EPDs to Aid Selection

The North American Limousin Foundation (NALF) uses all available information to predict an animal's EPD. This information includes: individual performance, pedigree, progeny and grand progeny performance, and genomic information. All this information is combined into one, easy to use, number that helps producers make genetic improvement in their herd.

Since the spring of 2015, NALF joined 11 other U.S. and Canadian breed associations to form the largest international multi-breed cattle evaluation in the world through International Genetic Solutions (IGS). This allows growth and carcass EPDs for Limousin and Lim-Flex® (Limousin x Angus hybrid) animals to be directly compared with Red Angus, Simmental, Gelbvieh, Shorthorn, Maine Anjou, and Chianina animals (and all their hybrid animals). This makes selection decisions easier for commercial producers.

Listed below are the definitions for Limousin and Lim-Flex EPDs and the units in which they are published. For more information visit www.NALF.org or call 303-220-1693.

Maternal and Growth Traits

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease.
Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Milk (MK): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. A greater TM value means a mother that returns comparatively higher weaning weights on her calves. $TM \text{ Index} = MK \text{ EPD} + \frac{1}{2} WW \text{ EPD}$.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease.

Scrotal circumference (SC): Is a good indicator of age at puberty, and is a highly heritable trait. EPDs for scrotal circumference are expressed in centimeters, with higher values indicating genes for larger yearling scrotal circumferences of sons and earlier puberty of daughters.

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six year of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

Docility (Doc): Predicts genetic differences in the probability that offspring are scored a 1 (docile) or 2 (restless) as opposed to 3, 4, 5 or 6 (nervous to very aggressive). Higher EPD values for docility represent genetics for calmer behavior.

Carcass Traits

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib. Smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Mainstream Terminal Index (\$MTI): Predicts genetic differences in profit per carcass by combining the potential for and value of post-weaning growth, quality grade and yield.

LIM-FLEX HYBRIDS

Bring Out The Best Of Multiple Breeds

by Jaclyn Krymowski for NALF

Lim-Flex animals, both genetically and phenotypically, show many strengths desired by both producers and consumers. In addition to the general “hybrid vigor” advantage of crossbreeding, those who select Limousin genetics for their programs also bring in the many maternal and terminal traits the breed is known for.

This means producers get a hardy animal efficient in multiple areas, along with quality progeny coupled with strong brood cows.

For consumers, the cross provides heavy muscling with great marbling for quality cuts of beef. (And it’s even done at a higher level of efficiency making it a win for the planet as well!)

The “flex” part of the Lim-Flex name derives from the flexibility and efficiency that comes with the pairing. The full name is Flexible Limousin Efficient Cross (X). Besides here in the U.S., it has also been a boon to the Australian beef sector.

Embracing the Flex

Cattle breeders coming from an Angus background, the most populous beef breed in the U.S., can add performance and increase daily weight gain with the addition of Limousin genetics. The resulting hybrid maintains the do-ability and marbling of Angus and the growth and muscle with the Limousin influence, thus maximizing the yield, according to Raven Limousin.

Many producers find they like the versatile ability of the cross and the ability to still get “the work done”. The Lim-Flex breed allows for all-around flexibility in terms of carcass merit and maternal abilities. It also opens the door to more abundant marketing thanks to the consistent high dressing percentage of the progeny. Both productive females and terminal offspring show high levels of efficiency when it comes to feed conversion.

Something especially attractive about Limousin genetics for crossbreeding is that it pairs well with different cattle varieties, that being both established beef lines and dairy cattle.

Pairing with Angus

With the proliferation and premium prices associated with Certified Angus beef, many producers flocked to the British breed. While being on the forefront of commercial beef, Angus animals also pose some challenges regarding efficiency in areas of feeding and carcass yield.

But, Limousin genetics paired with Angus produces a low proportion of bone and fat in addition to a high percentage of saleable meat that is great for marketability. In addition, they guarantee excellent productivity at a low cost.

From a producer’s standpoint, Limousin also balance quite well with the Angus personality and some of their most desired traits. Limousin bulls tend to bring lighter frames to their offspring to assist with calving ease while not giving up on confirmation, muscling or live weight. (Both Limousin bulls and cows are also touted for their fertility.)

The heavy Limousin muscling stems from a unique gene allele—one that doesn’t negatively impact the tenderness or meat quality.

The Angus cross in the Lim-Flex breed balances the Limousin traits. Their influence brings another level of marketing to the progeny and meat. Though Limousin provides the muscle mass, Angus provides the tenderness and marbling, or intramuscular fat, desired by the market. Angus already have a high dressing percentage, and this benefits the efficiency of the Limousin breed.

Dairy Impact

Dairy producers looking for better profit margins have taken a keener interest in breeding some of their lower value dairy animals to beef crosses for offspring that fetch more in the beef market. Limousin, with its favorable ribeye area, abundant muscling and beef quality, is a perfect complement to other dairy breeds who have marbling but lack the right beef structure.

A great example of this is illustrated in the pairing of Limousin bulls with Jersey cows. The Jersey breed is known for its ability to marble very well, but its small frame and lack of muscling make straightbred calves very poor candidates for beef buyers and processors. Luckily the Lim-Flex hybrid solves many of those issues.

Wulf Cattle in Morris, Minnesota, has worked with dairy farmers to help select the best Limousin sires to help meet their goals. Their “Beef Builder” dairy hybrids have significant gains over straightbred Jersey calves in areas of average daily gain, hot carcass weight and ribeye area all while consuming significantly less feed to gain. Combined, these all worked to make a hybrid Jersey bull calf as much as 10 times as profitable compared to a straightbred.

Other Benefits of the Lim-Flex

The compatibility of Limousin with other beef breeds provides producers with genetic options that have the goal of using the muscling and efficiency of Limousin and the marbling and maternal qualities from the Angus breed.

Oklahoma State University highlights how the powerful genetic blend allows flexibility for seedstock and marketable progeny with desirable dressing percentages and high yields. Additionally, the females adapt well not only in terms of efficiency as mentioned previously, but also to a range of environments.

The ability to adapt to a multitude of environments allows for the animal to be hardy in various extremes. Lim-Flex animals are not only hardy when it comes to the environmental changes, but their calving-ease traits and maternal aspects from Angus make them great mothers.

Without a doubt, Lim-Flex has impacted the industry for both producers and consumers in a positive way. The ability to beautifully blend some of the best qualities of Angus and Limousin together has shown many proven benefits. Angus provides the marbling and go-get-it that compliments the heavy muscling, hardy Limousin. Overall, the Lim-Flex was bred for the flexibility in a multitude of traits, and it fits the bill for both the consumer and producer.
