SELLING 111 LOTS ...

70 Lim-Flex, Purebred & Fullblood Bulls

Black • Red • Polled

Homozygous Black • Homozygous Polled

Offering 2-Yr.-Olds • Fall & Spring Yearlings

41 Females - Breds & Pairs

Dear Cow/Calf Producers,

Englewood Farms is proud to offer your largest quantity and best quality of bulls ever. We are selling 70 bulls (16 two-year-olds; 37 fall yearlings and 17 spring yearlings). All the bulls have passed breeding soundness examinations and all fall yearlings and two-year-olds have been ultra sounded for rib eye size, marbling and back fat. We are featuring 44 Lim-Flex, 22 purebred, and 4 fullblood Limousin bulls.

We have transitioned during the last two years to a herd made up primarily of Lim-Flex females (Limousin and Angus composites) as well as purebreds and fullbloods. The primary reason for this change was to produce seedstock that would meet the needs of the mainstream market for both commercial producers and registered producers. These bulls should help all producers in rebuilding cow/calf herds needed for the future.

Lim-Flex brings all attributes needed for both commercial producers and registration seedstock producers in today's highest prices ever for cattle and feed. Many of these benefits come from heterosis through crossbreeding. Most of these benefits will enable major cost savings in your replacement heifers and feeder calves.

Some of the major opportunities from using Lim-Flex bulls are as follows:

1. Better Feed Efficiency - Feed costs are 70% of the total cost of production. Lim-Flex bulls will produce calves that produce more pounds of calf for pounds of feed than most other breeds.

2. Calving Ease - The Lim-Flex bulls have low birth weight EPD's as well as better fertility increasing the percent of calves surviving.

3. Frame Size - the Lim-Flex bulls will all have moderate frame scores which is a major cost saving benefit in feed costs for replacement heifers and feeder calves.

4. Longevity/Structural Soundness - Limousin females have the best longevity of all breeds and will produce a greater number of calves from herds than other breeds.

5. Good Marbling Scores - Lim-Flex bulls have good marbling EPD's that will produce black hidred calves with Choice carcass capability.

6. Better Yield Grades - These bulls will produce cattle with better cut ability than most breeds making their calves more desirable.

Purebred and fullblood Limousin bulls used in crossbreeding will also add improved feed efficiency and better yield grades on other breeds of cattle.

In addition to the great set of bulls we are selling 41 females. The females offered will be 26 purebreds, 8 Lim-Flex and 7 registered Angus cows. All the females are bred to Limousin sires. You will like this group of females.

We hope you can join us on sale day, but if you can't be here we will feature our cattle on sale day live on DVAuction.com.

Sincerely,

Joanne and John Tobe

INSURANCE

Livestock Mortality Insurance will be available
through Grassroots Genetics, Mark Smith.

GUARANTEE

All cattle sell under the standard guarantee of the
North American Limousin Foundation.

TRUCKING

Trucking will be available to central points. it will
not exceed \$200/lot. Reliable, honest truckers
will be available. We will do everything possible to
get your cattle to you as efficiently and quickly as
possible.

SALE ORDER AND SUPPLEMENTAL INFORMATION

March 29th the sale order and supplemental
information will be posted at www.RRmktg.com
for your convenience.

ANNOUNCEMENTS

Announcements at the sale by the owners, auc-
tioneers or sale management will take precedence
over statements in the sale catalog.

FINANCING

For financing options please contact Randy Ratliff
at 615.330.2735.

PAYMENT

All cattle must be paid for immediately following
the conclusion of the sale. R & R Marketing
Company will now be accepting credit cards the
day of the sale.

TERMS & CONDITIONS

Terms of the sale are cash unless satisfactory cred-
it arrangements have been made prior to the sale.
A representative will be on hand sale day if your
wishes are to insure your purchases. Please note:
The sale manager is only an agent for the seller
and has no responsibility other than those
involved in conducting the sale. All persons who
attend the sale do so at their own risk. Neither the
sale manager nor Englewood Farms assume liabil-
ity, legal or otherwise, for any accidents which
may occur.

SIGHT UNSEEN PURCHASE AGREEMENT

If you are unable to attend the sale and want to
speak with any of the sale staff please don't hesi-
tate to call. They will provide you with a complete
satisfaction guarantee for the have purchased. If
within two weeks from the date of the sale you are
not satisfied with your purchased and how they
were described to you then the sellers will gladly
take the animal back.

DIRECTIONS

See page 5 of this catalog for detailed directions
to the sale facility.

LIMOUSIN Means Profit...

Whether you are a producer or a feeder, whether you sell calves or retain ownership, wherever you are, whatever your cowherd, whatever your market; Limousin and Lim-Flex genetics can enhance your profit from the pasture to the rail.

In the Pasture...

- Research has shown that Limousin cows wean a higher percent calf crop per cow exposed.
- Limousin cows are efficient producers on both low and high intake diets, making them fit in various environments
- The average Limousin cow culled for age is over 12 years old, adding 5 to 6 years of production past breakeven
- Docility EPD values have doubled in the past ten years
- Strauss Veal® offers a premium market for weaning age, natural, Limousin/Lim-Flex calves

"Some of these old cows we're running are 93 to 95 months. Those cows are 15 to 17 years of age. They calve well, wean heavy, and keep breeding back. They've paid for themselves a long time ago."

~ Casey Deuter, Deuter Ranches, Ree Heights, SD

Current rank of four major Continental Breeds, based off of MARC trial results.

Breed	Feed Efficiency		Repro/Maternal 1 st Calf Heifers	Repro/Maternal 3-6 Year Old Cows	
	Time 187 d	Fat Thickness 0.43 in	Weaned %	Born Alive %	Weaned %
Simmental	2	2	2	2	2
Gelbvieh	3	3	4	2	3
Limousin	1	1	1	1¹	1¹
Charolais	4	4	1	2	3

*Ranking determined from results published in the 2007 Germ Plasm Evaluation Report, ARS-USDA Meat Animal Research Center, Clay Center Nebraska.

¹Denotes ranking amongst all breeds included in study (Hereford, Angus, Red Angus, Simmental, Gelbvieh, Limousin, Charolais)

In the Feedlot...

- Limousin remains atop the Continental breeds for feed efficiency
- Limousin cattle maintain high feed efficiency at higher finishes and deeper in the feeding cycle
- Marketing opportunity with Laura's Lean Beef for high percentage or full blood Limousin cattle

On the Rail...

- Limousin can eliminate Yield Grade 4 and 5 cattle and increase percent Yield Grade 2 in one generation
- For each Yield Grade point improvement the processor can increase the value of beef in the box by \$100 to \$150 per carcass.
- Limousin cattle excel in percent retail product, yield grade and ribeye area
- In tasting panels, Limousin beef ranks high for tenderness, juiciness and flavor

Here is a guide to understanding Limousin EPDs. Utilize this tool to determine an animal's horned/pollled and color status, performance and carcass EPDs. Refer to the breed averages under the "Genetics & Performance" tab on the NALF web site to familiarize yourself with the breed EPDs. Evaluating breed averages and percentiles will allow you to narrow down your bull selection. NALF has a useful tool on its website called the "Sire Selector," which allows you to search for sire prospects based on your own selection criteria and benchmarks.

1 PLD – Polled Status of the animal with P denoting a polled animal

2 BLK – Black color status of the animal with B denoting a black animal

3 CED – Calving Ease Direct EPD and accuracy. When sires A and B are bred to similar replacement heifers, you'd expect 5 percent (the difference between +10% and +5%) more of sire A's calves to be born unassisted as compared to sire B's calves. Said another way, due to genes for calving ease passed on from the sires to their calves, each of sire A's calves out of first-calf heifers have a 5 percent greater chance of being born unassisted as compared to sire B's calves.

4 BW – Birth Weight EPD and accuracy. When mated to equal dams, progeny of sire A (listed above) are expected to weigh 4.0 lbs. less at birth than progeny of sire B (-1.0 – 3.0), due to genes for birth weight passed on from the sires.

5 WW – Weaning Weight EPD and accuracy. Weaning weight EPDs are predictors of pre-weaning growth of progeny. Of the two sires represented above, progeny of sire A are expected to weigh 6 lbs. less than progeny of sire B (44-38) at 205 days of age (when bred to dams of equal value), due to genes inherited for pre-weaning growth from the sires.

6 YW – Yearling Weight EPD and accuracy. Yearling weight EPDs are predictors of progeny growth to yearling ages. For example, progeny of sire A are expected to weigh 20 lbs. less (92-72) than progeny of sire B at 365 days of age (when mated to equal dams), due to genes for growth from the sires.

7 MA – Milking Ability EPD, and accuracy. Milk EPDs are predictors of pounds of daughters' progeny weaning weight due to genes for milk the daughters inherit from the parent in question. For example, daughters of sire A are expected to wean calves which are 7 lbs. heavier than calves from daughters of sire B (30 – 23 lbs.), due to genes for milk passed on to daughters.

8 CEM – Calving Ease Maternal EPD and accuracy. When daughters of sires A and B are bred to similar bulls, daughters of sire A have a 4 percent (14% –10%) greater chance of calving unassisted with their first calf as compared to daughters of sire B, due to differences in genes the daughters inherited from their sires for easy delivery of their first calves.

9 SC – Scrotal Circumference EPD, and accuracy. Scrotal EPDs are expressed in centimeters (cm), with higher values indicating the expectation of genes for larger average yearling scrotal circumferences to be passed on to sons. If mated to equal dams, sire B would be expected to produce sons which average 1.0 cm larger (1.0 – 0) than the average of sons of sire A. Scrotal circumference has also been correlated to the age of puberty in heifers

10 ST – Stayability EPD and accuracy. Stayability EPDs predict genetic differences in the probability that daughters will produce calves at the age of six years or beyond, given that at least one calf was produced prior to the age of six. Generally, higher stayability EPDs represent genetics for greater longevity. Sire B above is expected to have 15% more daughters still in production at the age of six or beyond (+20% vs. +5% = 15% difference) as compared to the percentage of daughters of sire A.

11 DOC – Docility EPD and accuracy. Docility EPDs predict genetic differences in the probability that offspring are scored as 1 (docile) or 2 (restless) as opposed to 3, 4, 5 or 6 (nervous to very aggressive). The higher docility EPD for sire A above is preferred to that of sire B; specifically indicating that 25% more (+15% for sire A to -10% for sire B = 25% difference) of sire A's offspring are expected to have scores of 1 or 2 as compared to offspring of sire B. Generally, the higher the accuracy value, the more progeny with docility scores in groups which have contributed to the EPD, making the EPD more reliable and less subject to change. Only groups with variation in docility scores are used in EPD evaluation.

12 CW – Carcass Weight EPD and accuracy. Carcass weight EPDs are used to genetically design carcasses with weights that fall within an acceptable industry weight range. Optimum carcass weight EPDs for sires will vary according to the types of cows to which the sires are mated and the calf growing/finishing management regime. If mated to cows of equal value, sire A would be expected to produce progeny with carcasses 10 pounds heavier (20 – 10) at harvest than sire B.

13 REA – Ribeye Area EPD and accuracy. Ribeye area EPDs offer an objective measurement of genetic differences in muscularity. EPDs for ribeye area are expressed in units of square inches, with larger values indicating larger ribeye area and increased expected overall carcass muscularity. Sire A is

expected to produce progeny with ribeye areas that are .30 square inches larger (.50 – .20) on average than progeny of sire B.

14 YG – Yield Grade EPD and accuracy. Just as lower carcass yield grades are favored and indicate greater cutability, lower YG EPDs are favored and indicate genetic differences for yield grade and cutability of offspring. When bred to similar cows, offspring of sire A are expected to average .10 (-.10-0) units of yield grade lower than offspring of sire B.

15 MARB – Marbling Score EPD and accuracy. The marbling score EPD is expressed in units of numeric USDA marbling score, with higher values indicating genes for greater deposition of intramuscular fat, or higher expected marbling score and USDA quality grade at a constant age. When mated to similar sets of cows, sire A would be expected to produce progeny with average marbling scores .20 units lower (-.10 – .10) than sire B.

16 SMTI – Mainstream Terminal Index. The mainstream terminal index takes both genetics and economics into account to rank animals in terms of expected profit per carcass produced from weaning to mainstream market endpoints of yield grade 1s and 2s and Select to low-Choice quality grades. It is based on the assumption that Angus-Hereford cows in a two breed rotation are mated to Limousin-influenced terminal sires and is determined primarily by genetics and economics associated with post-weaning growth and yield and quality grade. In this example, if sire A and sire B were mated to similar sets of black baldy cows, sire A would produce progeny with carcasses worth \$15 (\$55 – \$40) more than those of sire B. The mainstream terminal index does not have an associated accuracy value.

*ACC – Accuracy. Accuracy is a measure of the reliability associated with an EPD. For Limousin cattle, accuracy is designated by either a P (pedigree only), P+ (interim pedigree plus own performance in contemporary group) or a numeric value (performance of individual and subsequent progeny in contemporary group) which ranges from 0 to 1. Accuracy indicates the amount of performance information which was used to calculate the EPD.

Note: Carcass EPDs are only calculated for animals have had carcass data collected on them, their parents, or their progeny by either ultrasound or actual carcass data collection. So in the case of Bull B, for him to have pedigree estimates for his carcass values, his parents would have had data collected on themselves or their progeny.

KENTUCKY & TENNESSEE COST SHARE GUIDELINES

Kentucky Genetic EPD Standards

How to determine if a bull qualifies for a category

1. All categories require that the bull meet a minimum Calving Ease or maximum Birth Weight EPD. If the breed you are using computes Calving Ease EPDs then that is the EPD that must be used. The bulls EPD must be equal to or be greater than the value listed for that category. If the breed does not compute Calving Ease EPDs then Birth Weight EPDs will be used. The breeds that use Birth Weight have parentheses around their values. The bulls Birth Weight EPD must be equal to or less than this value.
 2. All categories have a requirement for growth, however, three have minimum values, one is a maximum value and for the other two there is an upper and lower limit. For Heifer Acceptable, Terminal Sire and High Productivity categories the bull's Weaning Weight OR Yearling Weight EPD must be equal to or greater than the value listed. For the Low Maintenance category the bull's Yearling Weight must be equal to or less than the value listed. For the Balanced Trait category the bull's Weaning Weight OR Yearling
- Weight EPD must be equal to or in between the two values listed. For the Carcass Merit category the bulls Carcass Weight EPD must be equal to or in-between the two values listed. In this category if the breed does not compute Carcass Weight EPDs then Yearling Weight EPDs are used and this is indicated by the values being in parentheses.
3. There are requirements for milking ability in three of the categories. Balanced Trait bulls must have an EPD that is equal to or in between the two values listed. For the Low Maintenance Category the bull's EPD must be equal to or less than the value listed. High Productivity bulls must have a value that is equal to or greater than the EPD listed in the guidelines. The other three categories have no requirement for milk.
 4. Carcass Merit bulls must also meet minimum standards carcass characteristics; one pertaining to improved Quality Grade and the other to improved Yield Grade. For improved Quality Grade the bull's EPD for Marbling or Intra-Muscular Fat (IMF) must be equal to or greater than the value listed (For Angus both Marbling and IMF values are listed and the bull must meet one or the other). For improved Yield Grade the bulls EPD for Yield Grade (lower values means greater red meat yield) must be equal to or less than the value listed. If the breed computes % Retail Product instead of Yield Grade EPDs then the bull's EPD must be equal to or greater than the value listed (For Angus either the Ultrasound %RP or the Carcass %RP may be used). If the breed does not compute Yield Grade or % Retail Product then the bull's EPD for Rib Eye Area (REA) must be equal to or greater than the value listed AND his EPD for Fat must be equal to or less than the value listed. Breeds that do not compute carcass EPDs do not qualify under this category.

For more information there is a video available at your county Extension office or contact your county agent for Agriculture and Natural Resources or Darrah Bullock, University of Kentucky Beef Extension Specialist - 859-257-7514 or dbullock@uky.edu

Tennessee Genetic EPD Standards

1. AI and/or natural service bulls must meet or exceed the min. requirements for one of the following three bull types - a. Balanced bulls; b. Terminal bulls; c. Heifer bulls

Each bull type (Balanced, Terminal or Heifer bull) has a different set of EPD requirements - The required set of EPD's must be met for each of the following three EPD trait categories: • Calving ease (CE or BW); • Growth (WW or YW) ; • Maternal (Milk range)

EPD values must be current as of June 1, 2011 to be eligible for reimbursement

2. Breeding Soundness Evaluation (BSE) - a. Bulls must pass a BSE - certificate from a licensed veterinarian must be included with reimbursement request; b. BSE must be dated within 90 days of purchase or reimbursement request
3. Electronic Identification (EID) - 15 digit number - a. Producer will identify bull with an electronic identification tag and provide number to TDA; b. Tags can be purchased at most farm supply stores or local veterinarian
4. Artificial Insemination (AI) - a. Cost of AI technicians or Tennessee licensed veterinarian fees are eligible - AI technicians must be certified by an accredited AI company; b. Producers certified to do AI through an accredited program (e.g., Genex, ABS or Select Sires, etc) can do their own AI work - Producer labor is not reimbursable
5. AI Certification - a. Training must be sponsored by an AI company that is a member of the National Association of Animal Breeders (NAAB) and follows the recommended guidelines - b. Min. of two days training required - part of which must be in a classroom environment
6. Testing - a. BSE & pregnancy testing - must be performed by a Tennessee licensed veterinarian; b. Animals must be officially identified in one of the following ways: EID, 840 or USDA metal tag, or a unique brand or tattoo; c. Veterinarian testing report with individual animal ID must be submitted for reimbursement

Highlighting this annual Englewood Farms bull sale are three full brothers and three remarkable herd sire prospects. They are the result of one of the very best matings that has ever been created at the ENG D program. They are sired by the huge numbered red and homozygous polled sire EXLR Review 7153R. He is sired by the many times National Gold Medal sire AUTO Black Dakot 129J and from the \$50,000 valued dam and big league donor for Magness Land & Cattle Co. These three black and homozygous polled herd bulls are from the \$35,000 valued donors SBLX Unknown 104U. She was a once big-league donor at Englewood Farm and is now working for our valued customers at Edwards Land & Cattle Co., Beulaville, NC and Pinegar Limousin, Springfield, MO. She is a daughter of MYTTY In Focus and is from the breed great and matriarch donor for Sugar Bush Limousin. When selecting your next herd sire then consider from this three herd sires and to come along with them will be a world of promotion.

- Lot 2 BW: 82 lbs.; Lot 3 BW: 68 lbs.; Lot 4 BW: 72 lbs.

A sale feature is these two black and homozygous polled full brothers. They represent the strength and power in a great mating. Sired by the big numbered EXLR Review 7153R these bulls have the power and performance to back their namesake. They are from the leading Edwards Land & Cattle Co. donor MAGS Tapestry. She is a proven daughter of MYTTY In Focus and from the famed MAGS Gretchen donor. She is the dam of the 2012 NAILE reserve grand champion Lim-Flex sire and big time herd sire for Double A Limousin, Shawnee, KS, Jepson Limousin, Franklin, KY and Sugar Bush Limousin, Allen, MI. When you considering your next herd sire then make sure and study the pedigree, performance and breed leading EPD's of these two herd sires.

Lot 5 BW: 70 lbs.; Lot 6 BW: 77 lbs.

These two full brothers are sale features for Englewood Farm and could be big time herd sires for any program in the country. They are sired by the Magness and Edwards Land & Cattle Co. sire MAGS Undoing. He is a son maternal sibling to EXLR Review 7153R and is sired by the leading Angus sire GAR Predestined. Take a look at the EPD profile of these herd bulls and admire how they rank in the top % in birth weight, yearling weight, milk and MTI. These two sons of JONK 70U are some of the finest in the sale and they represent the big-time Englewood Farm donor JONK Poll Unique 70U. She is a daughter of AUTO Dollar General 122R and has surfaced as one of the top producers of excellence in the ENGD program. Her calves wean the heaviest and always stand out in the contemporary groups.
